INJECTION PRESSURE REGULATOR TEST SYSTEM

RESTRICTION

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to a structure of an injection pressure regulator testing system, classified in class 73, subclass 119A.
- II. Claims 8-12, drawn to a method for testing an injection pressure regulator by use of a hydraulic fluid in order to determine the pressure level of the pressure regulator, classified in class 73, subclass 119A.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)).

Art Unit: 2855

In this case, the apparatus (ie. the system) can test a pressure regulator system without requiring pumping hydraulic fluid into a test chamber or determining whether the injection pressure regulator can achieve a selected pressure level. Furthermore, the apparatus can operate a pressure regulator system without the testing thereof because nothing in apparatus claims (ie. Invention I) actually requires the testing of an injection pressure regulator as in Invention II.

Because these inventions are distinct for the reasons given above and the search required for Invention I is not required for Invention II, restriction for examination purposes as indicated is proper.

The Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).
